SOFTWARE ENGINEER - PRODUCT

1. OVERVIEW

feedcop is a rapidly growing tech company located in Columbus, OH, specializing in enterprise cloud security. Since our launch in 2015, our platform has received world-wide attention and is trusted by some of the largest enterprises in the Fortune 100. Demand for securing cloud data is growing and so is the need to expand our platform by introducing new capabilities.   Does working in a bleeding-edge industry on a killer security platform excite you? Now is your chance to work with our high energy, talented team in our fast-paced technical startup. If you're a fit, benefits like unlimited vacation and a cool office await you!

2. RESPONSIBILITIES

The primary responsibilities for this development position are to build and maintain our security platform. This includes developing new capabilities, researching security trends and supporting existing customer needs. This team member will have the opportunity to hit the ground running while closely mentored by their engineering peers. You will wear many hats, making this a great opportunity to practice what you learn on an exciting new cloud security product.

3. DESIRED SKILLSET

Our platform is built on the Microsoft stack and having experience in that knowledge area will most certainly help you be successful. We're looking for entry-level engineers with knowledge or experience in the following areas:

- Visual Studio
- C# .NET
- Web application development
- JavaScript
- SQL

Additional experience in the following areas would be an advantage:

- Team Foundation Server
- ASP.NET MVC
- AngularJS
- Unit Testing
- Entity Framework / ADO.NET
- Secure Development Practices
