SCRIPPS

College of Communication

J.W. McClure School of Information and Telecommunication Systems

Why Should I be there?

Build Your Resume With

1. Practical Experience on Internet Security Concepts
2. Become An Internet Security Journalist
3. Learn the Internet Security Parlance
4. Learn how attacks are carried out.
5. Practice Internet Security Writing by Contributing to our blog

Promising Opportunities

IT is a growing field: The U.S. Department of Labor expects jobs for network, network security and computer systems administrators to increase by nearly 28 percent by 2020. Thus Increasing the demand for high-tech communication systems in all sectors of the economy, be among the first Internet Security Experts, OR be amongst the first Communicators of Internet Security Concepts, OR be the IT expert in Internet Security OR be any combination of the above.

JOIN INSEC NOW!

Security Journalists are rare, writing quality articles require an in-depth understanding of the various forms of security threats that the internet, networks and personal computer faces.

With INSEC, we will not only explain the concepts of security we will give you a computer to mimic an attacker—and yes you will attack and learn how to prevent these attacks. Thereafter, you will write about it!

I've always wanted to understand how attackers intrude systems. INSEC walks me through a step by step process on how attackers operate, INSEC teaches me how to prevent these attacks—I will apply this knowledge on the field when I graduate.
