

Coming Fall Semester 2018:

A New Course on Global Climate Change!

GEOG 3060X: The Physical and Global Dimensions of Climate Change

MWF 12:55 – 1:50 PM

Clippinger 103

Email Dr. Ryan Fogt with any questions: fogtr@ohio.edu

This course examines climate change from multiple dimensions, beginning with the physical science that defines global climate change, through how climate change impacts physical and biological systems, and ending with solutions for climate change at various scales, including how the science is communicated.

Only Pre-Requisite is Junior or Senior standing!

A great course for:

- Any student with environmental interests
- Students concerned about the future of our planet and what can be done to ensure its preservation
- Students majoring in Political science (especially environmental policy), Geology, Geography, Biological Sciences, and related fields, as well as those pursuing the environmental studies certificate
