Ohio University Council of Teachers of Mathematics presents

What is the middle of a Fibonacci sequence?

Presented by Bob Klein

We will take an old friend, a Fibonacci Sequence, and ask some new questions about it. Fibonacci sequences were named for Leonardo of Pisa and derive from a problem framed around rabbits multiplying (not in the mathematical sense). After this talk, you may never look at a Fibonacci Sequence the same way.

This session is appropriate to all who like to ask questions and solve problems. Education majors, math majors, community members, and others (of all ages) are welcome. Cost of admission is free as is the cost of leaving if you don't enjoy it.

Tuesday, February 25, 2014
7:45-8:45 PM, 303 McCracken Hall, Ohio University
